## What we do.

We create innovative technology for people with hearing loss, and for companies and institutions committed to accessibility.

Our products are created to empower deaf people, and the society they are part of, supporting with technology a real inclusion.

# A social responsible company.

We are part of the international Bcorp movement. We believe in another way of doing business, in generating a positive impact on the environment and measuring success by social impact, not just by economical indicators. We have been recognized as one of the best companies for the world by Bcorp. We dedicate 0.7% of our profits to training courses for young deaf people in new technologies. We believe that education and labor integration is the key. We are a team of deaf and hearing people, because only together we can create the world we imagine.

# What is Visualfy Home.

Visualfy Home is a sound recognition system devised for hard of hearing people's homes. With only one system, it is able to recognize sounds such as a doorbell, a telephone, an alarm clock, a fire alarm or a baby crying, alerting the user through flashing colours and vibrations ,which are totally customizable, on any connected device.

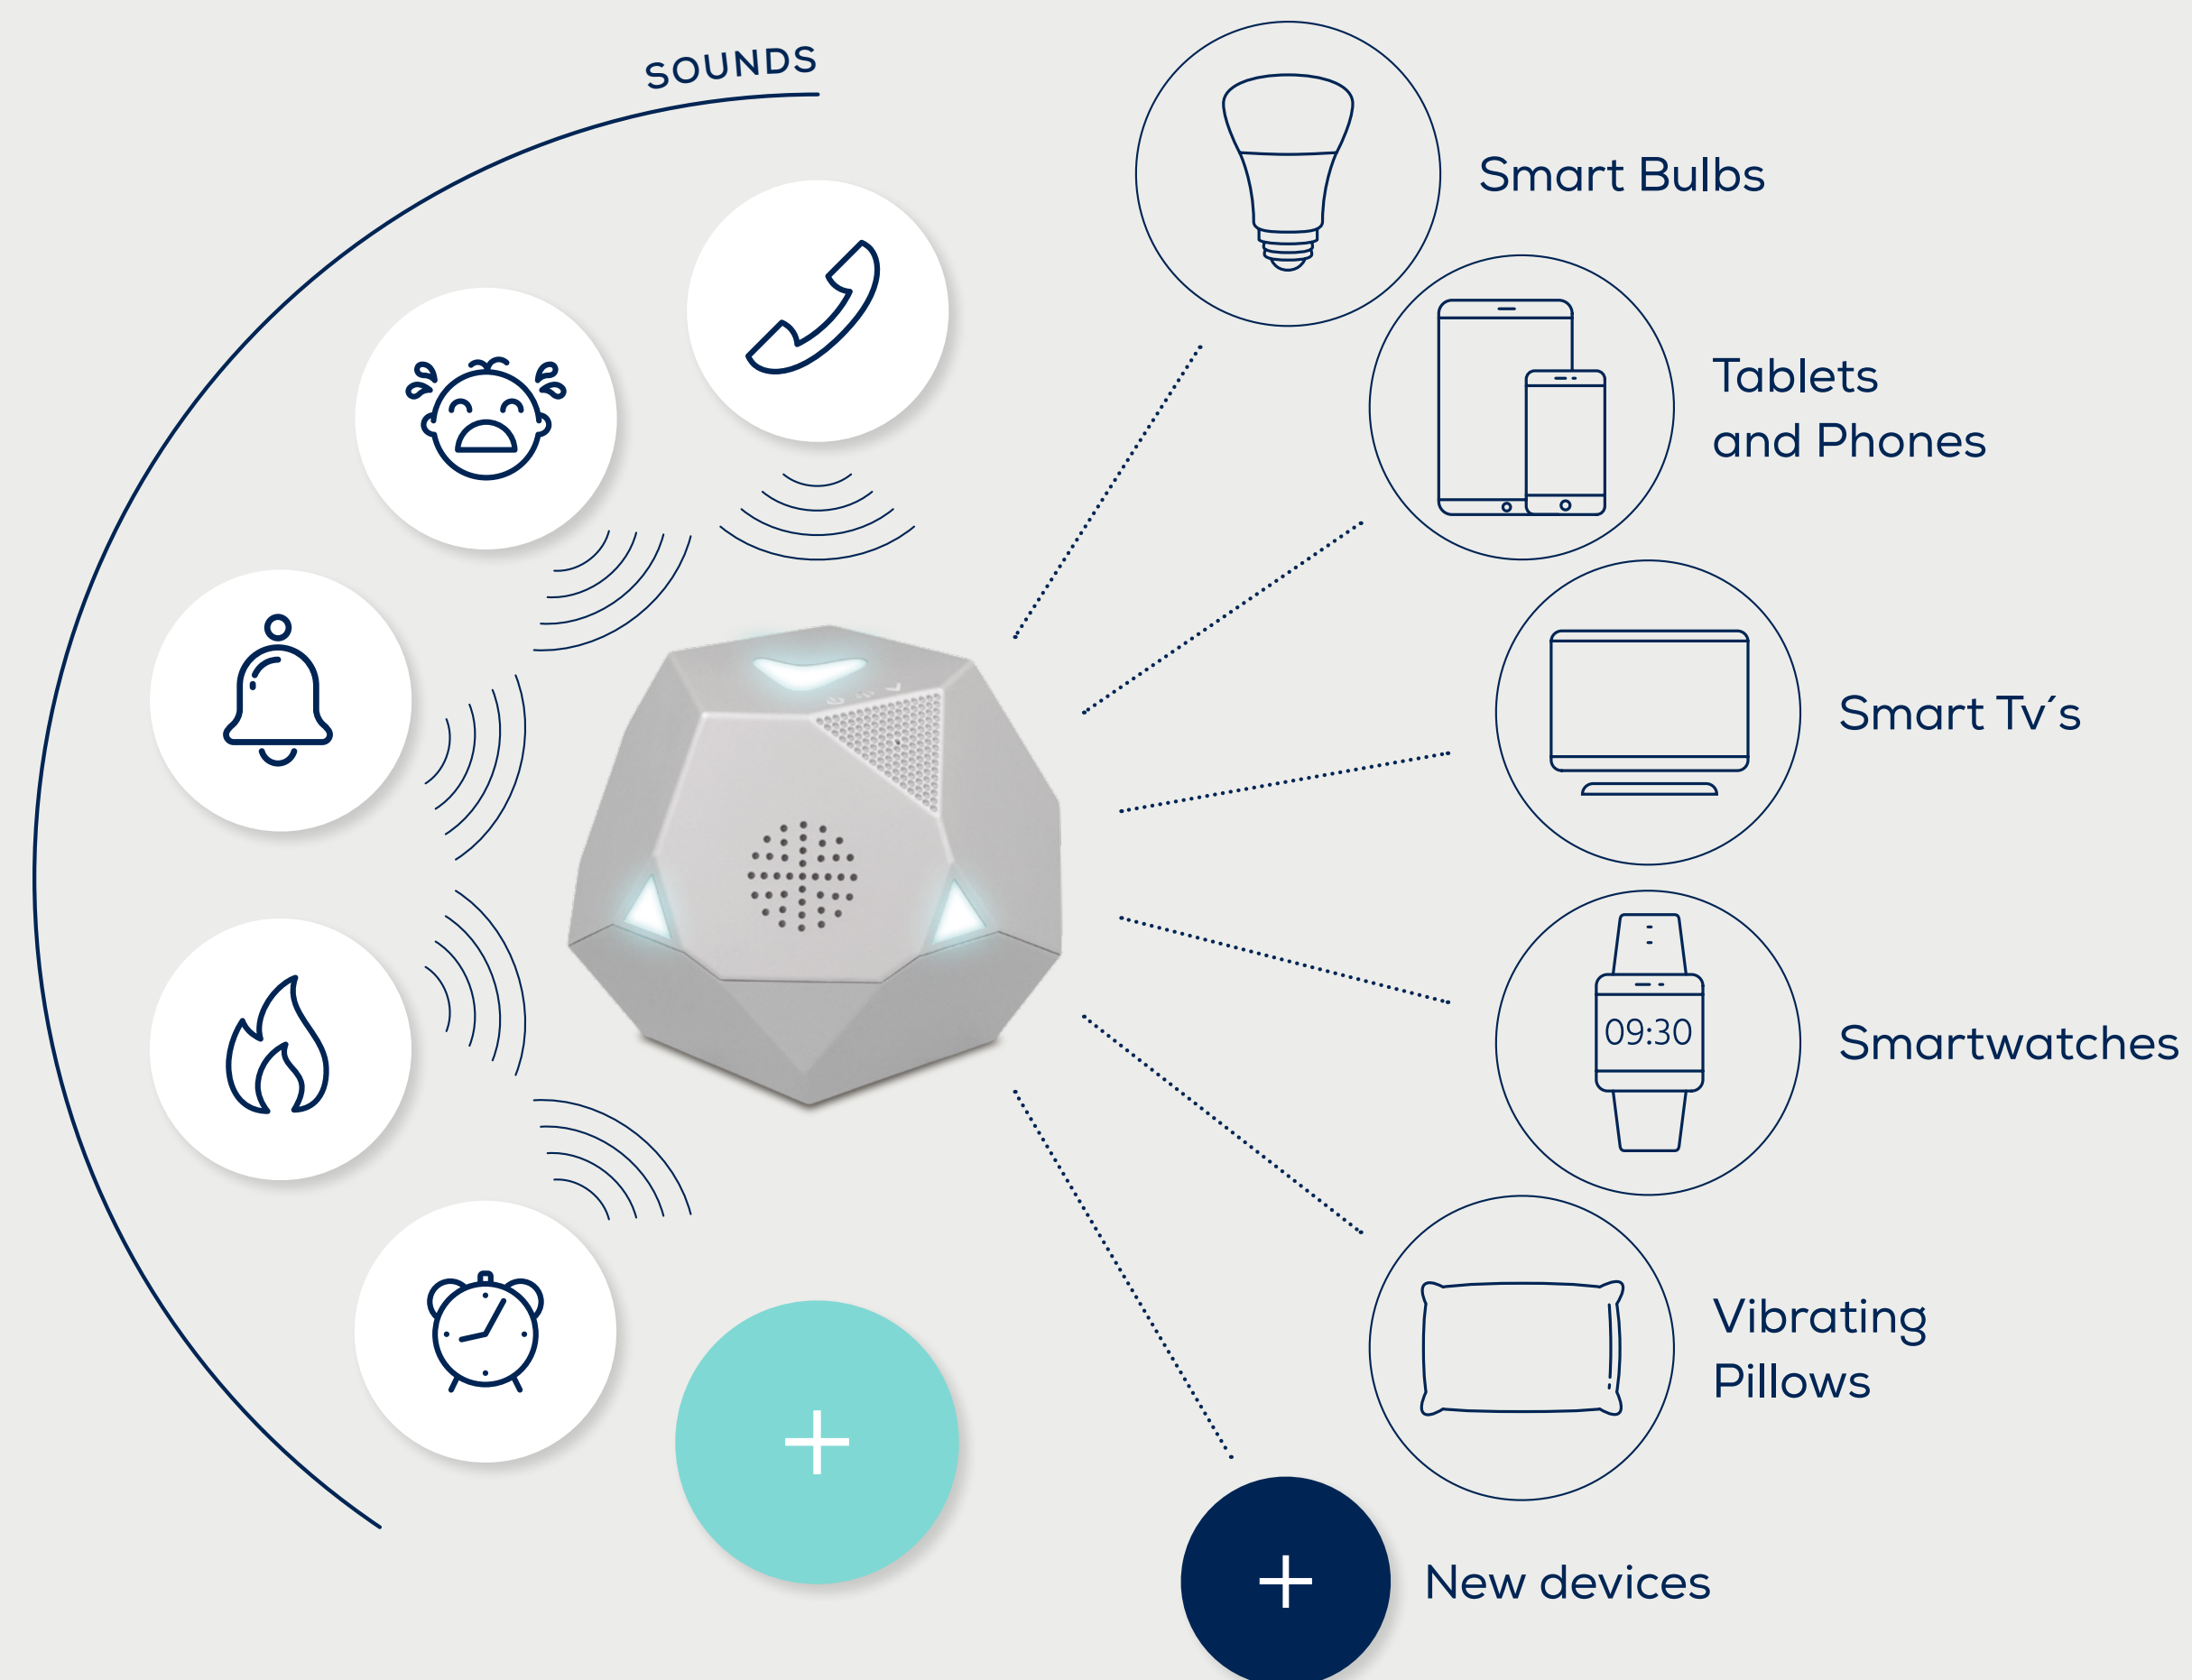

# How it works.

Visualfy Home consists of a main unit (Hub) and three additional sound detectors, to be distributed at the user's home, near the sound sources.

The system is easily configured through the app and, once installed, it recognizes the sounds and alerts the user immediately.

Alerts are fully customizable, and are received in the form (colour, light, vibration...) and devices (detectors, smartphones, smartwatch...) decided by the user.

# Differential value.

OTHER BRANDS

**Multiple  
devices**

VISUALFY

**Just one  
system**

Unlike other solutions that require buying and installing multiple devices, Visualfy users can have their homes entirely adapted with a single installation-free system, with ongoing sound and feature updates at no additional cost.

# Sounds and alerts.

There are currently seven sounds available. We are continuously developing new sounds and alerts. Users have access to them for free, just by updating the app.

## Available Sounds

Doorbell

Intercom

Baby crying

Fire Alarm

Alarm Clock

Kettle

Telephone

## Next Sounds

Burglar  
Alarm

Extractor  
Hood

Fridge

Barking Dog

Microwave

# Compatible devices.

## A wide range of compatible devices to receive the alerts however you want

When Visualfy Home detects a sound, it sends an alert to the device chosen by the user, from the latest mobile phone to the most innovative smart watch or smartband. That way, not only does the hub light up, but the alerts can be adapted to the user and move around as they do.

### Android / iOS / Wear OS / Phillips Hue

We are continuously working on new integrations so the Visualfy family of compatible devices keeps growing. Stay Tuned!

Smart bulbs

Tablets and phones

Smart Tv's

Smart Watches

Vibrating pillows

# The App.

Visualfy App translates environmental sounds into visual alerts and vibration patterns.

Through Visualfy Mobile (free), users can turn their mobile notifications into visual alerts, making their mobile phones more accessible. \*\*

Visualfy App is also used to configure Visualfy Home, a smart home device that turns home sounds (doorbell, telephone, baby crying, fire alarm...) into visual alerts. The user can personalize the alerts, choose the devices he wants to receive the alerts on, and invite other family members to join, so they do not miss anything, in a simple and intuitive way.

Finally, Visualfy Places (free) is list of places, accesible for people with hearing loss, near the user's location.

\*\* Functionality only available for Android users.
